

ADVISE ANY AGENT

*advice is a field on each node's typed input —
the same surface automated callers use*

*free-form advice, weighted
like any other advisor*

TAKE ANY SEAT

*reject the agent's candidate, hand-write the proposal
artifact, invoke the implementor on it —
no pipeline state to resume or repair*

*any seat, not just this one —
a human stands in for an agent, mid-loop*

USE ONE ALONE

*hand it your own model, get it back tuned and scored —
one node, no workflow, no other agents involved*

*every agent is a ready-made tool,
usable on its own*

One typed contract for every seat — humans and agents are interchangeable.
