

DECLARED BY THE TASK

TASK PACKAGE

SCIENTIFIC TASK DECLARATION

- data & deliverable
- metrics and their roles
- validity checks
- scientific context

meaning stays outside framework code

WHAT EACH QUANTITY DECIDES

TRAINING OBJECTIVE

what the model is trained to optimize

VALIDATION BEHAVIOR

how learning is going, epoch by epoch

SCIENTIFIC SELECTION

selects the final result

↑ **declared direction**

SECONDARY EVIDENCE

shown to the agents as evidence

never selects

AND WHETHER IT COUNTS AT ALL

VALIDITY

a separate question from quality

GATE 1 · BEFORE SCORING

Is this output scoreable at all?

fails → a recorded refusal

GATE 2 · BETWEEN ROUNDS

Is more compute justified here?

fails → the run is routed away

validity

No single number plays all of these roles.
